Kathrein-Scala Makes Antenna Radiation Patterns Available on the Web

New Service Allows Data Downloads in 19 Formats

Medford, OR – Kathrein Inc., Scala Division has just launched a new service from its Website, allowing registered visitors to download its radiation patterns.

Over 700 antennas for land mobile, wireless, and broadcast applications are characterized in 19 different formats that may be applied directly to propagation analysis software. Data is available on both current models and antennas that are no longer in production.

Kathrein-Scala provides data in compressed files for each antenna, saving download time. Files contain horizontal and vertical radiation patterns at multiple frequencies, and at various downtilt angles where appropriate.

Formats supported include: Acrobat, Anet, AntPat, ASCII, CDMAPlanner, Ce4, CellCAD, CelPlan, Comstudy, CSV, dBPlanner (uses Planet), EDX, Geoplan, Granet, Netplan, Odyssey, Pathpro, Planet, Tap, and Wizard.

Potential users may register for download privileges at:
